token address: [0x1c8266a4369af6d80df2659ba47b3c98f35cb8be](#)

“**Crypto is the anomaly in the system**, the Neo in the matrix. **It exists as the remainder of the universally corrupt economic equation that all of us face.** KOJI allows us to work outside of that system, to give back where needed, to give our community something valuable, and to give everyone a symbol of hope in a darkening world.

**Nodezy**  
Lead Developer

## DISCLAIMER

While this whitepaper outlines the project's goals and ethos, **this document is not legally binding and does not constitute any form of financial or investment advice**. Nor should it be considered a final version **and is subject to change without prior notice** as the project is always evolving and the team is looking for the best opportunities and developments for the community.

# 1. Introduction

KOJI is the token of the people. It is a distributed, worldwide, decentralized digital token, **designed to unite the earth population with a core mission of helping in times of crisis and donating to charitable organizations.**

In simple terms, KOJI is a hybrid digital token: **a DeFi Charity following a deflationary model with redistribution features and regular NFT drops.** It aims to cement its position as the leading mutual-aid token by helping the world with an automatic 3% tax on every transaction, buy and/or sell.

## Community Driver

KOJI is a community driven token based on the Ethereum network. It is managed without any central authority: there is no government, company, or bank in charge of KOJI. The community already decided the specific tokenomics and will continue involving it in future decisions as KOJI spreads around earth.

**Make sure you are part of the telegram group <https://t.me/kojiearth> to help steer our direction and get our latest news.**

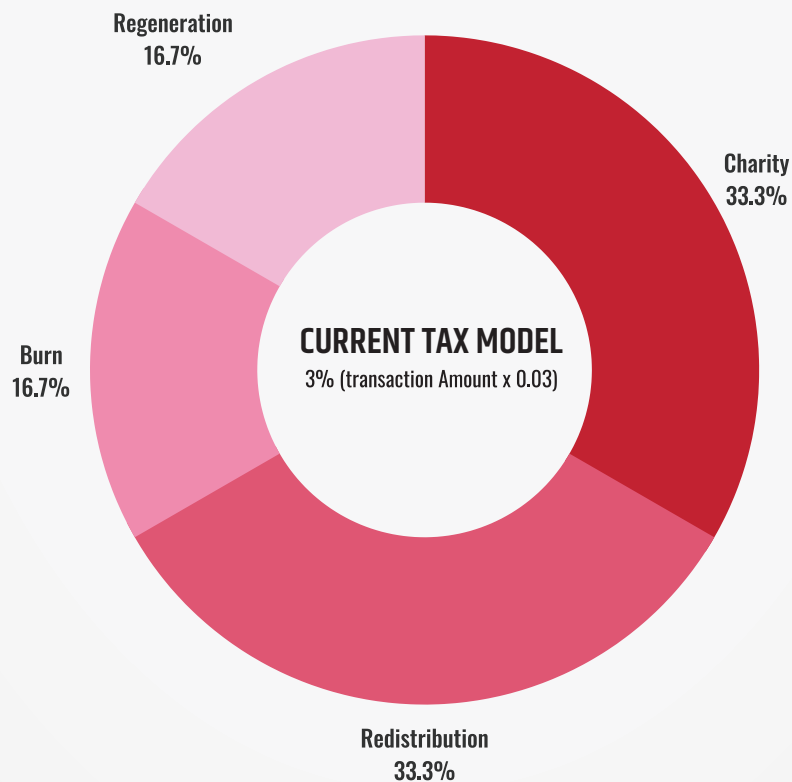

The development team is entirely composed of volunteers covering a wide range of skills, who have dedicated long hours and hard work to making this project a reality.

## 2. TAX model

The 3% transaction tax is distributed into four different categories per current TAX model:

1. **1%** of it will be sent to a **charity wallet**.
2. **1%** will be **redistributed to all KOJI holders**.
3. **0.5% regeneration fee** to help maintain the future development and expansion of KOJI.
4. **0.5% will be removed from the circulating supply**, also known as “burn” (characteristic of a deflationary currency) .

KOJI, to the best of the team’s knowledge, is **the first of its kind to integrate these features into one token**: Automatic charitable donations, burn, redistribution, and regeneration fees (to help investing in further development of KOJI such as NFT creation, marketing and exchange listings).

## 2.1 TAX Distribution

All taxed tokens will be distributed in the same manner, following the formula.

**Taxed KOJI** = Transaction Amount x TAX = Transaction Amount x 0.03 (TAX=0.03 in our case)

**Redistribution per wallet** = Transaction Amount x 0.03 x Circulating Supply Share

The aforementioned taxes will be explained in detail through the Tokenomics section. **Our number one priority is to be able to make transparent charity contributions, decided by the community's popular vote.**

Due to the complex logistics of these contributions we have included a more detailed explanation below.

## 2.2 Charity Wallet

**The charity wallet will be funded with 1% of every transaction.** Anything accrued in the charity wallet will only ever be used to donate to charitable causes and nonprofit organizations. The charity wallet will pay the necessary gas fees to convert KOJI to ETH and if needed ETH to fiat (USD), as some of the donations will be unrealizable if kept in KOJI or ETH.

The charity wallet will transfer KOJI obtained to ETH regularly, avoiding build up of the donation and reducing the price impact of this cash-out.

**The charity will be changed on a regular basis and donations will be made to the most relevant charities possible.** Changing charities regularly will allow us to be able to target specific supported organizations if natural disasters (such as tsunamis or earthquakes) unfortunately strike. **We will use the community pages for holders' suggestions on charitable causes; all charities will be inspected and registered.**

We will try and help the smaller charities that have boots on the ground, so a smaller part of all donations is lost in excessive CEO wages and bonuses.

## 2.3 **TOKEN Burn**

Token burning, added as a slice of the transaction tax, means that a certain amount (0.5% for KOJI) of that transaction is removed from circulatory supply. **Burnt tokens cannot be reintroduced into the supply, making KOJI scarcer and rarer every transaction.**

In this situation, holding is greatly rewarded: holders will see their market share increased due to the ever reducing circulatory supply.

## 2.4 **Redistribution**

Redistribution has been implemented in KOJI's contract and takes place every transaction, similar to the burn feature.

**The agreed redistribution accounts for 1% of the transaction**, split accordingly between all the holders. Every buy or sell transaction, **all holders will receive a cut of the redistribution, proportional to their market share.**

You will need to hold your KOJI in an Ethereum based wallet (Metamask, TrustWallet, etc.) to automatically claim the redistribution.

## 2.5 Regeneration

**The regeneration fee secures the future development and expansion of KOJI** and allows for optimal management of the creative designs such as NFT drops and marketing, etc and accounts for 0.5% per transaction.

Most tokens rely on big holders (whales) investing a substantial amount of money, making long term sustainability incredibly difficult and will always have a conflict of interest as the “whales” will have to sell to regain their investment (initially used to develop the token and increase its reach).

**This transaction based fee means that KOJI relies solely on KOJI for income and will not require further funding from external sources.** NFTs are scheduled to be dropped every 4 weeks minimum at the start of the project, although the aim is to increase the NFT drops to once every week or even daily (years down the line) if the regeneration fee allows for it.

**All money accrued in the regeneration fund will be used to further develop the quality and reach of KOJI while keeping full transparency, as all transactions from/to that wallet will be publicly available (e.g. on Etherscan).**

Please remember that getting listed in even the small exchanges costs a substantial amount of money, making the regeneration fee imperative for long term growth and independence. The mentioned wallet (in a similar fashion to the charity wallet) will be emptied regularly and held in Ethereum, lowering the impact on price fluctuations.

### 3. Tokenomics

The total supply of KOJI tokens is 1 Trillion (1,000,000,000,000) and all have already been minted. **No more will ever exist and after launch total supply will decrease** due to the current tax model's 0.5% burn on all transactions. The tokens will have the following initial distribution:

**Over 80% of the initial KOJI will be distributed** via vested airdrop (4.3%), private sale a.k.a. pre-sale (7.5%), public sale (40%), and liquidity provision in Uniswap (ETH Mainnet, Layer 1 implementation at the time of writing) and Quickswap (MATIC Mainnet, in Ethereum Layer 2) accounting for a total 30% of the total tokens combined.

Our team has decided to tackle the high gas fees from the Layer 1 Ethereum transactions by making use of MATIC's Layer 2 sidechain, which in turn will make trading much easier and provide extremely low gas fees. Uniswap's Optimism rollout may be able to match those fees, but the timeline is undefined and we do not want our project to be held back by Uniswap's developments.

## 3.1 Vested Airdrop

The airdrop was gestated and carefully planned after watching how a community was abandoned due to the development team leaving the project unattended and unable to recover the contract's admin keys, for more information about the airdrop check this [medium article](#).

The airdrop is scheduled to happen simultaneously to KOJI's release, and represents 4.3% of the total token supply (\$32,118 worth of Koji at the time of pre-sale).

**KOJI's first charitable deed was set to be an airdrop to said community** that supported our project from the start and greatly helped steer our direction through votes and continuous discussions and feedback in our telegram group. Due to the size of this airdrop, the airdropped tokens will be linearly vested through the first 6 months after the release, with a minimum vesting of 3 months depending on the wallet size. These tokens will be available to withdraw from our website <https://koji.earth> after the listing on Uniswap.

## 3.2 Pre-sale Offering

The pre-sale offering hosted on April 21st 2021 accounted for 75 billion KOJI (7.5% of the total supply) and is the seed money being used to pay for development costs, such as artwork, website development, contract audits, contract migrations to the Ethereum network, and other small expenses.

25 ETH were raised from said presale, **which sold out in less than 10 minutes** due to the massive community support.

### 3.3 Public Sale Offering

Our public sale took place on June 1st 2021, where **400 billion KOJI (40% of the total supply) was sold in under 30(!) seconds raising 133 ETH.**

**A minimum of 80% of the money raised during the public sale will be put in the liquidity pool.** If any KOJI are left unsold after the public sale closes, the tokens will be sent to the burn address and locked forever.

### 3.4 Locked Liquidity

As previously stated, the team will provide two different liquidity pools with at least 80% of all ETH raised in public sale, split equally between the two exchanges. Half of the liquidity will be provided on Uniswap at the time of launch, paired with enough KOJI tokens to make the listing price slightly higher than public sale.

Uniswap's counterpart on the MATIC network, Quickswap, will get the other half of the total liquidity, getting at least 40% of all ETH raised in public sale, paired with enough KOJI tokens to make the listing price match the Uniswap price as closely as possible to reduce price discrepancies. **Both liquidities will be locked for 6 months to start with, with the aim of locking the LP tokens forever.** Locking over \$300k forever would be unreasonable and would not allow for any mistakes or changes, meaning the money could be completely lost.

**The team will be prudent in this matter and will make sure that everything is working before liquidity is locked forever.**

## 3.5 Token Reserve

Approximately 9% of the total supply will go into a token treasury. These tokens will be locked on our [vesting contract](#) (same as the admin wallets) for 3 months, with a third of the total amount unlocking every 30 days.

**The treasury tokens will be used to supply liquidity on other exchanges, for marketing, advertising, and in some instances burned depending on the token economy at the time.**

A number of interesting partnerships with other exchanges and projects may present in the future (you probably have already heard about our relationship with FEG), where tokens will be needed to help develop our project even further.

**The treasury tokens would be used to fund the costs of said developments, and they will never be dumped by the team or used for trivial expenses.**

### 3.6 Admin Wallets

The admin wallet contains all the tokens designated to the team. The core developer team members will receive 14.6B KOJI, 13.6B of which will be vested linearly over a 6 month time period; while additional team members will receive 1B unvested like the rest of the team and 5B vested tokens, again linearly, over the same period.

Early investors will be rewarded for their help in starting up the project and developing the token, getting 6B and 7.5B respectively.

**We greatly appreciate the efforts they have put into the project which will help us succeed, both in the short and long term.**

Team Distribution from Admin Wallet (92.5B)

Developers vested for 6 months, early investors will have their tokens available at launch.

■ vested  
■ unvested

## 4. Innovative & Highly Collectible NFTs

KOJI's community is unique and we want the project to be unique as well, so in addition to the previous features holders will be rewarded with highly collectible NFTs. **Our monthly NFT airdrop will allow holders to collect and sell the KOJI NFTs (e.g. on OpenSea and Rarible, etc).**

The first collectible will be a depiction of the mysterious Koji character and will be given to all airdrop recipients and pre-sale purchasers, making this 1st edition KOJI NFT highly valuable. After the official launch, KOJI holders will be rewarded regularly with NFTs which will compose an original comic book.

Investors will be able to view the virtual comic book on our website where owned and missing pages will be shown, and they will also be able to buy missing pages on supported platforms to complete their collection. Similarly, they will be able to sell the said NFTs in the same supported platforms.

**All wallets connected with the website that own a complete NFT comic will be shipped the physical comic book to their addresses free of charge!**

Following NFT drops will require a minimum amount of KOJI in the holder's wallet, although the threshold is still to be defined. Rarity is a fundamental part of what makes an NFT valuable, making NFT drops available to every holder would decrease its value and would reward even residual amounts of KOJI left in previous holders' wallets.

We want to reward active and supportive holders and the only way of doing so will be to implement a certain threshold. We will also reward LP providers with exclusive NFTs.

## 5. Contact & Team

If you have any questions or suggestions, please contact us using the telegram group:
